

InCadence Strategic Solutions introduces Axon™ CloudChannel™ technology, a web-based advanced cloud management platform for managing applications and servers within Elastic Computing Cloud (EC2) environments.

- ✦ Axon's advanced drag-and-drop interface allows you to drag out virtual images and immediately provision and stand up virtual server instances in the cloud.
- ✦ Axon can manage the virtual servers of multiple stakeholders within an organization, and each stakeholder can manage one or more Channels
- ✦ Axon drag-to-link capability establishes links between virtual servers, and Axon configuration services automatically configure database connections, web service connections, and other configuration settings between server nodes in the Channel.
- ✦ Axon can incorporate plug-ins to communicate with various back-end EC2 cloud implementations, including commercial clouds such as Amazon AWS and Microsoft Azure, or Government cloud implementations.

Axon Portal

The Cloud

- ✦ Stand up and configure the equivalent of hundreds of thousands of dollars in hardware in minutes
- ✦ InCadence engineers can help virtualize your current systems and migrate them to the cloud
- ✦ Application servers are scaled and available on demand to support mission requirements
- ✦ Manage virtual server instance security, patches and upgrades in a cloud environment
- ✦ Integrate multiple related programs and technologies in a single cloud infrastructure
- ✦ Always run on the latest hardware with all of the redundancy and up time availability of the cloud
